

The Access Starter Kit (ASK)

The Access Starter Kit (ASK) contains equipment needed to operate a one or two-door PassPoint Access Control System. It uses convenient Proximity style card readers. Installation and set-up is quick and easy with PassPoint's "Express" Windows '95 based software. Follow the Quick-Start Guide and unique "PassPointer" Configuration Wizards to the successful installation of a two reader access control system. Start with one ASK and then expand your system by adding PassPoint's Door Expansion Kits (DEK's).

ADEMCO Access Control System, ASK Access Starter Kit.

Key Features:

Access Starter Kit (ASK) contains:

- ◆ 1 System Enclosure - including cam-lock
- ◆ 1 Intelligent Distributed Power Supply

 - True 32 bit applications compatible with WIN95
 - Graphical presentation of system architecture
 - Control over system resources by point and click functionality
 - Real time monitoring of events
 - Configuration Wizards

PASSPOINT

ASK Access Starter Kit

APPLICATIONS:

The PassPoint Access Control System may be operated both on-line and off-line – depending on the preference of the user and the size of installation. Once the system has been configured using a PC, PassPoint is fully operational in the off-line mode. The system need only be brought on-line for subsequent card enrollments or time schedule adjustments. Each Access Starter Kit comes complete with PassPoint "Express" Windows'95 based software, which allows the system administrator to configure hardware, add/delete cardholders, upload system events and generate customized reporting – all with comprehensive, context-sensitive help and Configuration Wizards.

PassPoint Windows Software is a fresh interpretation on a classic graphical presentation. PassPoint "Express" Windows allows the system administrator to configure, monitor, control and report on all activities and resources on the system.

OFF-LINE OPERATION

For low event-transactions or small installations where daily cardholder database maintenance is not required, the off-line operations mode may be ideal and extremely cost-effective.

ON-LINE OPERATION

For more demanding access control system installations, a dedicated PC may be used. In this scenario, the PC continuously runs the "Express" Software and allows visual monitoring of system activities.

INSTALLATION:

To complete the installation for ASK you will need:

Door Locks

- ◆ Magnetic locks or electric strikes

Cables

- ◆ For power: 10 feet of 2-conductor 18AWG wire
- ◆ For card readers: 5-conductor 16AWG stranded shielded wire suggested
- ◆ For LonWorks Network: - 22AWG unshielded twisted pair

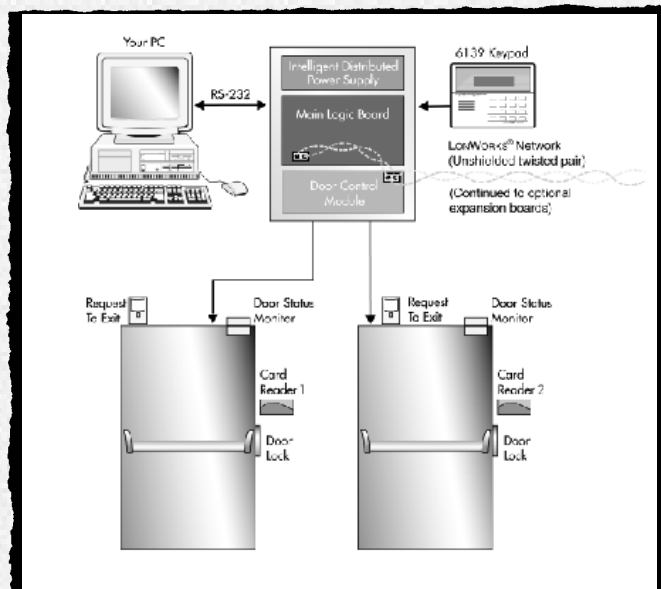

Battery

- ◆ 7AH

Other optional materials

- ◆ Door contacts
- ◆ Request to exit device

NOTE: The above items are not contained in the starter kit.

SPECIFICATIONS:

Requirements:

- ◆ IBM Compatible PC - Intel Pentium Processor (90 mHz or faster)
- ◆ Operating System - Windows 95
- ◆ Memory - 16 MB
- ◆ Disk space - 20 MB Hard drive space available

Listings/Approvals:

- ◆ UL#294
