## Wiring the V4000

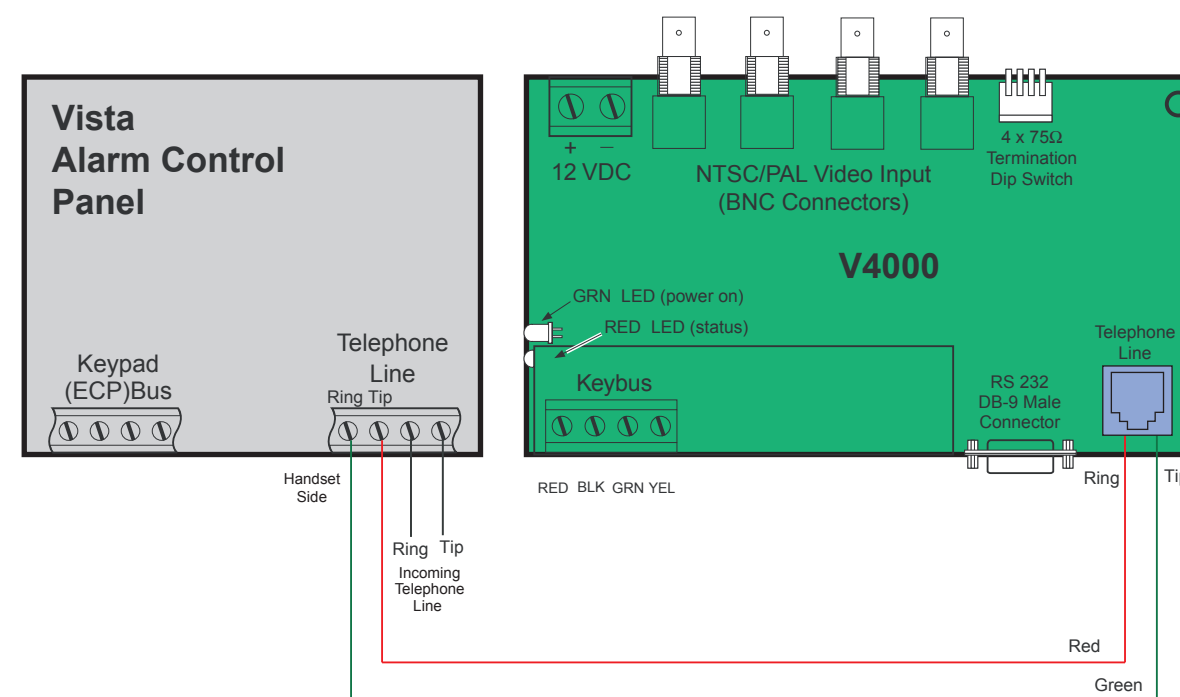

# 4

## Connect Video Cameras and Power Supply

# 5

## Connect Telephone Line

# 6

## Connect with Central Station

Follow these steps to add video services such as visual verification, video open/close reports and OzMail notification.

- Contact your central station account manager (if central station is not OzVision Compatible, please have them contact OzVision).
- Inform the central station what services will be used.
- Provide the central station with the telephone number of the unit, as well as which sensor is associated with each camera.
- Provide the central station with the buffer parameters (length of the pre and post alarm) for the video event.
- Send signals from each zone to the central station to verify that signals are being properly received.

# 7

## Install the Software (OPTIONAL)

The **Control Center Application** allows your customer to dial-in to the V4000 unit and view live video. Confirm that the computer meets the minimum hardware requirements and follow the on-screen instructions. This software may be installed on multiple computers by your customer.

**Please Note:**  
A standard modem connection is required for the computer on which the software is to be installed.

DSL and Cable modem connections are currently not supported.
