Honeywell

ADEMCO VISTA-12E Security Systems

Programming Guide

TO START PROGRAM MODE, use method A or B (must use alpha keypad connected to keypad terminals):

- A. POWER UP, then press both [*] and [#] at same time within 50 seconds of powering up.

 (if *98 was used to exit program mode, this is the only method that can be used to start program mode again)
- B. Initially, key: Installer Code (4 + 1 + 1 + 2) plus 8 + 0 + 0.

Data Field Programming Procedures

Task	Procedure									
Go to a Data Field	Press [*] + [Field Number], followed by the required entry.									
Entering Data When the desired field number appears, simply make the required entry. When the last entry for is entered, the keypad beeps three times and automatically displays the next data field in seque If the number of digits that you need to enter in a data field is less than the maximum digits available.										
	(for example, the phone number fields *41, *42), enter the desired data, then press [*] to end the entry.									
Review a Data Field	Press [#] + [Field Number]. Data will be displayed for that field number. No changes will be accepted in this mode.									
Deleting an Entry	Press [*] + [Field Number] + [*]. (Applies only to fields *40–*43, *45, *94, and pager programming fields)									

Menu Mode Programming (*56, *57, *58, *79, *80, *81, *82, *83)

Press [*] + [Interactive Mode No.] (for example, *56). The alpha keypad displays the first of a series of prompts.

Interactive Mode	Used to Program
★ 56 Zone Programming	Zone characteristics, report codes, alpha descriptors, and serial numbers for 5800 RF transmitters.
*57 Function Key Programming	Unlabeled keypad keys (known as ABCD keys) for special functions
*58 Zone Programming (Expert mode)	Same options as *56 mode, but with fewer prompts. Intended for those familiar with this type of programming, otherwise *56 mode is recommended.
★79 Output Device Mapping	Assign module addresses and map individual relays/powerline carrier devices
*80 Output Programming	4229 or 4204 Relay modules, 6164 output relay, Powerline Carrier devices, or on- board triggers
*81 Zone List Programming	Zone Lists for relay/powerline carrier activation, chime zones, pager zones, etc.
*82 Alpha Programming	Zone alpha descriptors
*83 Configurable Zone type Prog	Attributes for configurable zone types

INITIALIZE DOWNLOAD and RESET DEFAULTS (complete Default Tables are listed on page 20)

- *96 Initializes download ID and subscriber account number.
- ***97** Sets all data fields to original factory default values as follows:

The VISTA-12E has two unique sets (tables) of default entries.

Press *97 while in Program Mode, then press 1 or 2 to load the desired set of factory defaults (see Default Tables listed on page 20). This resets all data fields to the respective default table values.

User Code Defaults: To reset only the user codes to default values, press *97, then press 3.

TO EXIT PROGRAMMING MODE:

- ***98** Exits programming mode and *prevents* re-entry by: Installer Code + 8 + 0 + 0. If *****98 is used to exit programming mode, system must be powered down, and method 1 above used to enter the programming mode.
- *99 Exits programming mode and allows re-entry by: Installer Code + 8 + 0 + 0 or method A above.

Special Messages

OC = OPEN CIRCUIT (no communication between keypad and Control).

EE or ENTRY ERROR = ERROR (invalid field number entered; re-enter valid field number).

After powering up, **AC**, **dI** (disabled) or **Busy Standby** and **NOT READY** will be displayed after approximately 4 seconds. This will revert to a "**Ready**" message in approximately 1 minute, which allows PIRS, etc. to stabilize. You can bypass this delay by pressing [#] + [0].

If **E4** or **E8** appears, more zones than the expansion units can handle have been programmed. Correct the programming and then completely de-power and re-power the control to clear this indication and remove the disable indication.

PROGRAMMING FORM

Entry of a number other than one specified will give unpredictable results. Default values are shown in brackets, with unique table 1 and table 2 values indicated where applicable (DT1 = default table 1; DT2 = default table 2); see page 20 for a complete list of factory default tables 1 and 2

NOTES:

Zone Type: see chart on next page

Basic wired Type (zns 1-6):

0 = EOL 1 = NC

2 = NO

3 = zone doubling

4 = double-balanced

Input Type: 2 = AW (zones 17-24) 3 = RF (zones 9-24) 4 = UR (zones 9-24) 5 = BR (zones 49-64)

7 = RM (zones 9-24)

NOTE: Zones 9-14 not available depending on whether zone doubling enabled on zones 1-6.

Report: yes = Contact ID reporting enabled for this zone; entered as 01 00 in appropriate data fields.

Response Time:

0 = 10msec 1 = 400msec

2 = 700msec

3 = 1.2 sec

NOTE: If zone doubling is selected, the response time selected for the basic zone automatically applies to the associated doubled zone.

Reserved Zones

91 = addressable device report enable/disable default zone type = [05].

92 = Duress report enable/disable

*56 ZONE PROGRAMMING MENU MODE (press *56 while in Program mode)

*5800 button-type transmitters only

10 Partition

Enter the desired partition for this zone

1-3 = partition

[*] to continue

10 Report Code 1st 01 2nd 00 10

1

Enter the report code for this zone, which consists of 2 hexadecimal digits, each in turn consisting of 2 numerical digits. For example, for a report code of "10," enter 01 and 00.

For Contact ID®, entering any non-zero entry as the first digit enables the report code for this zone.

1-9, 10 for A, 11 for B, 12 for C, 13 for D, 14 for E, 15 for F

00 to disable; [*] to continue

02 HARDWIRE TYPE **EOL** 0 This prompt appears only for zone numbers 01-06.

Enter the desired basic wired type:

0 = EOL; 1 = NC; 2 = NO; 3 = zone doubling (ZD); 4 = double-balanced (DB)

[*] to continue

02 Response Time

This prompt appears only for basic wired zones 01-06 (zone 02 is used as an example in display).

0 = 10mSec; 1 = 400mSec; 2 = 700mSec; 3 = 1.2 seconds

[*] to continue

10 INPUT TYPE **RF TRANS** 3

This prompt is skipped for zones 1-6, and for zones 9-14 if zone-doubling enabled at "Hardwire Type" prompt. All of the RF transmitters have one or more unique input loops (see list below). Each of the input loops requires its own programming zone (e.g., a 5804's four inputs requires four zones).

2 = AW (Aux wired zone)

- 3 = RF (supervised RF transmitter; sends fault, restore, and low-battery signals, and sends periodic check-in signals; transmitter must stay within receiver's range)
- 4 = UR (unsupervised RF transmitter; sends fault, restore, and low-battery signals, but periodic check-in signals are not supervised; transmitter may be carried off-premises)
- 5 = BR (unsupervised button type RF transmitter; sends fault and low battery signals when activated, does not send restore or check-in signals; transmitter may be carried off-premises)
- RM (supervised RF motion detector; sends fault and low battery signals, and sends periodic check-in signals; panel ignores detector restore signals but automatically restores the zone to "ready" after a few seconds; transmitter must stay within receiver's range)

NOTE: While the system is disarmed, faults from input type RM devices might not be seen on the keypad display because the subsequent automatic restore can occur more quickly than the display is refreshed.

[*] to continue NOTES:

- For the built-in basic wired zones, the Input Type is automatically displayed as HW and cannot be edited.
- To change the input type of a previously programmed wireless device (type RF, UR, BR, RM) to a wired zone (type AW), you must first delete the transmitter's serial number.

10 INPUT S/N: A022-4064

For wireless transmitters, enroll the serial number and loop number as follows:

- 1. a. Transmit two open/close sequences. If using a button-type transmitter, press and release the button twice, but wait about 4 seconds before pressing the button the second time.
 - b. Manually enter the 7-digit serial number printed on the label of the transmitter. Press the [*] key to move to the "L" position, then enter the loop number. If desired, you can press the [C] key to copy the previously enrolled serial number (used when programming a transmitter with several input loops). The cursor moves to the loop number position.
 - c. To delete an existing serial number, enter 0 in the loop number field. The serial number will change to 0's. If 0 was entered in error, simply re-enter the loop number or press [#], and the serial number will return to the display.
- 2. Press [*] to continue. The system now checks for a duplicate serial/loop number combination.

10 INPUT S/N A022-4064

L

1

If the serial/loop number combination is not a duplicate in the system, a display showing the serial number and loop number entry appears.

[*] to continue

XMIT TO CONFIRM PRESS * TO SKIP

This prompt will only appear if you answered "Yes" at the first prompt in this section.

The system will enter a confirmation mode so that the operation of the actual programmed input can be confirmed.

Activate the loop input or button that corresponds to this zone.

[*] to continue

Entd A022-4063 1 Rcvd A022-4064 1 If the serial/loop number transmitted does not match the serial number entered, a display showing the entered and the received serial/loop numbers appears.

If so, activate the loop input or button on the transmitter once again. If a match is not obtained (i.e., summary display does not appear), press the [#] key twice and then enter (or transmit) the correct serial number.

[*] to continue

Zn ZT RC In: L 10 03 10 RF: 1s If the serial number transmitted matches the serial number entered, the keypad will beep 3 times and a summary display will appear, showing that zone's programming. An "s" indicates that a transmitter's serial number has been enrolled.

[*] to accept the zone information and continue

PROGRAM ALPHA? 0 = NO 1 = YES 0 If you want to program descriptors for zones now, enter 1 (Yes) and refer to the *82 Descriptor Programming section for procedures. To program descriptors later, enter 0 (no).

[*] to continue

ENTER ZN NUM. (00 = QUIT) 11

If 0 (No) was entered at the Program Alpha prompt, the system will return you to the ENTER ZN NUM. prompt for the next zone.

When all zones have been programmed, enter 00 to quit.

★58 Expert Programming Mode Procedures (press ★58 while in Data Programming mode)

SET TO CONFIRM? 0 = NO 1 = YES 0 = no

1 = yes (prompt appears after entering the serial and loop numbers to confirm each transmitter) We recommend that you confirm the programming of every transmitter.

Zn ZT P RC HW: RT 01 09 1 10 EL 1

A summary screen will appear, showing zone 1's currently programmed values.

Enter the zone number being programmed, then press [*]. In this example, zone 10 is being entered. 01-06, 09-24, and 49-64 = zone number

[D] = for assigning wireless key programming templates (see Wireless Key Programming Templates section in i/i); lets you choose from a series of preset templates for easy programming of wireless key zones
 00 = quit (when all zones have been programmed, press "00" to quit this menu mode)

[*] to continue

Zn ZT P RC IN: L 10 - - -: -

Zn ZT P RC IN: L 10 00 1 10 RF 1 A summary screen with the selected zone's current programming appears.

Begin programming zone information as follows:

Enter Zone Type (ZT; see Zone Type chart shown in *56 Menu Mode "Zone Type" prompt), Partition (P), Report Code (RC) 0-9 only (use *56 mode for hex codes), and Input Device Type (IN)* sequentially (Loop Number (L) is entered at the next prompt).

- Use the [A] (Advance) and [B] (Back) keys on the keypad to move the cursor within the screen.
- Use the [C] key to copy the previous zone's attributes.
- * If HW (basic wired) or AW (Auxiliary) is entered for Input Device Type, the display will be similar to the prompt shown, except that HW or AW will be under "IN".

Press [*] to save the programming and continue. If needed, press the [#] key to back up without saving. For wireless devices (input types RF, UR, BR, RM), continue to the serial number/loop number prompt. For wired devices, return to the initial summary screen prompt to begin programming the next zone.

10 INPUT S/N: L A<u>X</u>XX-XXX - Manually enter the serial number (found on the transmitter label), by entering the digits in the "X" locations, using the [A] (advance) or [B] (back) keys as required.

Transmit two open/close sequences. If using a button-type transmitter, press and release the button twice, but wait about 4 seconds before pressing the button the second time.

If you want to copy the previous zone's serial number, press the [C] key. Press [*] to advance to the loop number, then enter loop number.

Zn ZT P RC In L 10 03 1 10 RF:1s

Press [*] to accept the existing serial and loop number and continue to the "Confirm" prompt described in *56 Menu mode above.

If necessary, press [#] to back up and re-enter or edit the serial number.

If the serial number transmitted matches the serial number entered, the keypad will beep 3 times and a summary display will appear, showing the programmed information for that zone.

Press [*] to begin programming the next zone. See first "Summary Screen" prompt paragraph on previous page.

Wireless Key Programming Templates (press the [D] key from *58 Menu mode Summary Screen display)

This procedure programs the wireless keys, but a key is not active until it is assigned to a user number (see System Operation section, assigning attributes command in the Installation Instructions).

TEMPLATE ?	
1–6	1

Enter desired template number 1-6 (see chart below).

Press [#] if you want to return to *58 Menu mode Summary Screen.

If necessary, press [#] to back up and re-enter template number.

Press [*] to continue to template display.

L 01 02 03 04 T 23 22 21 23 When [*] is pressed, the selected template will be displayed.

Top line of display represents loop numbers, bottom line represents zone type assigned for each loop.

Press [*] to accept template and continue.

PARTITION 1

Enter the partition in which the key is to be active.

1 = partition 1; 2 = partition 2; 3 = common partition

Press [*] to continue.

ENTER START ZONE 00 = QUIT 36 The system will search for the highest available consecutive 4-zone group (the four zones in the case of the 5804), and display the lowest zone number of the group.

If you want to start at a different zone, enter the zone desired, and press [*]. If that zone number is displayed, the system has the required number of consecutive zones available, beginning with the zone you entered. If not, the system will again display a suggested zone that can be used.

If the required number of consecutive zones is not available at all, the system will display "00".

Press [*] to accept and continue.

INPUT S/N L AXXX-XXXX – Manually enter the serial number printed on the label for the wireless key or press and release the button to transmit its serial number.

Press [*] to accept the serial number. The system will check for duplicate.

If necessary, press the [#] key to back up without saving, and re-enter the serial number.

Use the [A] key to move forward within the screen, and the [B] key to move backward.

XMIT TO CONFIRM PRESS * TO SKIP

If "Yes" was entered at the SET TO CONFIRM? prompt (first prompt following entry into the *58 Expert Programming Mode), the display on the left will appear.

Confirm serial and loop numbers by activating the wireless key. Refer to the "Confirm" prompt described in *56 Menu mode above for more information on confirming the serial number.

If the serial number transmitted matches the serial number entered, the keypad will beep 3 times and will return you to the ENTER START ZONE NUMBER prompt to enter the starting zone for the next wireless key. **IMPORTANT:** When confirmed, the key is not active until it is assigned to a user number (using the assigning attributes command, attribute "4"). See System Operation section in Installation Instructions. [*] to skip confirm.

***81 ZONE LISTS**

List No.	Used For	Contains These Zones
01	General Purpose (GP)	
02	General Purpose	
03	Chime-by-Zone or GP	
04	Linked Zones	
05	Night-Stay Zones or GP	
06	General Purpose	
07	General Purpose	
08	Final Contact Set Zones or G P	
09	Zones activating pager 1 or G P	
10	Zones activating pager 2 or G P	
11	General Purpose	
12	Exit Zones (*88) or GP	

NOTES:

- Any list may include any or all of the system's zone numbers.
- A zone list can be assigned to more than one output relay.
- When creating zone list 4 for linked zones, include only zones assigned to zone types 3, 4, or 5. Do not include zones that have delays (entry/exit zones, interior w/delay) or 24-hour zones, as these zone types may produce unpredictable operation and may not function as intended.

Start Zone List Program Mode by pressing *81 while in Data Programming mode.

Zone List No. (00 = Quit) 01 Enter the Zone List Number to program (or 00 to end these entries).

01-12 = zone list number

[*] to continue

01 Enter Zn Num. (00 = Quit) 00 Enter each zone number to add to the zone list.

01-06, 09-24, 49-64 = zone numbers followed by [*] to accept each zone

00 to continue

IMPORTANT: Do not include fire zones in zone lists that are used to STOP device actions.

01 Del Zn List? 0 = No 1 = Yes 0 0 = don't delete list; current zone list remains saved

1 = delete this zone list; All zones in the zone list will be deleted automatically and the system returns to the Zone List No. prompt.

[*] to continue

01 Delete Zone? 0 = No 1 = Yes 0 0 = don't delete zones; save zone list and return to the Zone List No. prompt.

1 = go to next prompt to delete zones

[*] to continue

01 Zn to Delete? (00 = Quit) 00 Enter each zone to be deleted from the list

01-06, 09-24, 49-64 = zones to be deleted from list followed by [*] to accept each zone

00 when done to return to the Zone List No. prompt

***82 DESCRIPTOR PROGRAMMING**

Start Zone Descriptor Programming mode by pressing *82 while in Data Programming mode.

Program Alpha? 0=No, 1=Yes 00 The "Program Alpha?" prompt appears.

1 = program zone descriptors or partition descriptors

0 = exit

[*] to continue

Sel Zone Des=0 Part =1 This prompt selects whether you are entering zone descriptors or entering partition descriptors.

0 = create zone descriptors (see Zone No? prompt below)

1 = create partition descriptors

[*] to continue

If "1" selected, the following prompt appears.

Enter the 2-digit partition descriptor number (11-13) to be programmed, then press [*].

PART? 00

11 = partition 1 descriptor; 12 = partition 2 descriptor; 13 = partition 3 descriptor

Enter the descriptor as described in steps 1-3 in the Zone Number section below.

Zone No.? 00

Enter the zone number for the descriptor you are programming.

Press [*] to continue. A cursor appears at the beginning of the second line.

Special Keys:

[6] = accept character and move cursor to next position to right

[4] = move cursor to left

[8] = save descriptor

Refer to the Character Chart below.

Press [#], followed by the 3-digit entry for the first letter you want to display (e.g., # 0 6 5 for "A").

Press [6] to move the cursor to the right, in position for the next character.

Repeat Step 1 to enter the next characters until the desired descriptor is entered. You can use the [4] key to move the cursor to the left, if necessary.
 Descriptors can be a maximum of 16 characters.

- 3. When done, press the [8] key to save the descriptor and return to the "Zone No. ?" prompt. To enter a descriptor for the next zone,
- Enter the zone number for the next descriptor, press [*], and repeat steps 1-3.
 To change a custom word (partition descriptor), simply overwrite it.
 To exit, enter zone number "00."

	1=Alarm 3=fault 000-999
Start Configurable Zone Ty	be Programming Mode by pressing *83 while in Data Programming mode.
Enter Zone Type	Enter the configurable zone type number being programmed. 90-93
(00=quit) 90	[*] to continue
90 Zn Attributes 0	Enter the desired zone attributes. 0 = none
90 Bypass Option 0	Enter the desired bypass option. 0 = zone type cannot be bypassed 1 = auto bypassed when armed in stay mode [*] to continue
90 Resp to Short	Select the type of response when zones assigned to this zone type are shorted when the system is armed. 0=none 2=trouble NOTE: • For double-balanced zones, this entry must be 0.
Armed 0 DArmd 0	1=alarm 3=fault • For zone-doubled zones, this entry must be 0. • For zone-doubled zones, both zones of the doubled pair must
	[*] to continue be assigned the same response to a short.
90 Resp to open	Select the type of response when zones assigned to this zone type are opened when the system is armed. 0 = none
Armed 0 DArmd 0	1 = alarm 3 = fault
	[*] to continue
90 Vent Zone	If selected, the system can be armed even if zones assigned to this zone type are faulted. NOTE: After arming, faults on these zones will be ignored until the zone is restored.
0 = No, 1 = Yes	0=no; 1=yes; [*] to continue
90 Alm/Trbl Proc 0	Select desired actions for zones assigned to this zone type. 0=none; 1=Zone type has automatic restore; 2=zone type uses Misc. Fault Delay Time (selected in field *87) and automatic restore NOTE: If 6 was selected above for the Zone Attribute, enter 0 for this prompt. [*] to continue
90 TRBL SOUND 0	Select type of sounding upon trouble conditions on zones assigned to this zone type. 0=none; 1=one beep every minute; 2= normal trouble sound (fast beeps) [*] to continue
90 ALARM SOUND 0	Select type of sounding upon alarm conditions on zones assigned to this zone type. 0=none; 1= keypad sound only; 2= steady siren sounding; 3= pulsing siren (temporal) [*] to continue
90 Dial Delay 0=No, 1=Yes	If selected, faults on zones assigned to this zone type will delay reporting for whatever length of time that is selected in dial delay (*50) 0=no; 1=yes; [*] to continue
90 Disp Option	Select whether faults on zones assigned to this zone type are displayed at the touch pad and/or cause a chime sound. 0=no display; 1=display only; 2 = chime only; 3 = chime & disp. [*] to continue
Alarm ID: 000	Enter the desired 3-digit (000-999) Contact ID report codes for faults and troubles occurring on zones
Trouble ID: 000	assigned to this zone type. [*] to continue; returns to Enter configurable zone type number prompt.
	IMPORTANT

IMPORTANT:

- Make sure the code does not conflict with existing, predefined Contact ID report codes. See the System Communication section in the Installation Instructions for a list of standard Contact ID codes.
- Zone alarm report code (prompt in *56 Zone Programming) and Trouble report code (*60) and relevant restore codes (*70, *71) must be enabled in order for the Configurable Zone Type codes to be reported.

Schedules (installer code + [#] + [6] [4]; master code can only access schedules 01-04 and events 00-08)

Sched	Event	Device No.	User	Partition	Start Time/ Days	Warning	Stop Time/ Days	Repeat	Random
No.	(see list	for event	Group	for events	select days by	Delay	select days by	enter	0 = no
	below)	"01":	for event	"04-06":	entering"1" under	Time	entering"1" under	0-4	1 = yes
		relays = 01- 04	"02":	enter 1, 2, or 3	each desired		days desired	(see list below)	
		triggers = 17,	enter 1-8	013		01-15 =		below)	
		18			HH:MM SMTWTFS	minutes	HH:MM SMTWTFS		
01									
02									
03									
04									
05									
06									
07									
08									

Events:

Master/Installer 00 = clear event

01 = device on/off

02 = user access 03 = child not home report 04 = forced STAY arm

05 = forced AWAY arm 06 = auto disarm

07 = display "reminder" 08 = disarm time window Installer Only

11 = periodic test report 12 = up and about

Repeat Options: 0 = no repeat

1 = repeat weekly

2 = repeat every other week 3 = repeat every 3rd week

4 = repeat every 4th week

Start Scheduling mode by entering installer code + [#] + [6] [4] while in normal operating mode.

NOTES: • The master code can only access schedules 01-4 and events 00-08.

System clock must be set before programming schedules.

Programmed schedules do not take effect until the next scheduled "start" time. (e.g., if programming a schedule time window for 8AM to 5PM, the schedule does not take effect until 8AM after the schedule has been programmed.)

ENTER SCHED NO. 00=QUIT 00

Enter the desired schedule number.

01-04 = end-user schedules

05-08 = installer-only schedules

[*] to continue

ENTER EVENT

NOTE: Events 07 and 10

cause the keypad to beep

every 30 seconds when

messages are displayed.

+ OFF.

Stop the beeps by user code

Enter the desired event number for event you want to occur at a specified time.

00 = clear event

01 = Relay On/Off

02 = User Access

03 = Child Not Home Report to Pager (sent to all pagers in the user's partition; message sent is 777-7777; user must be enabled for paging)

04 = Auto (Forced) Stay Arming[†] (Forced bypass is automatically enabled regardless of setting in field *23)

05 = Auto (Forced) Away Arming[†] (Forced bypass is automatically enabled regardless of setting in field *23)

06 = Auto Disarm

07 = Display "Reminder"

08 = Disarm Time Window (system can be disarmed only during this time period. Exception: If a burglary alarm occurs, the system can be disarmed outside the scheduled time window.

11 = Periodic Test Report (installer only)

12 = Up and About (installer only)

[*] to continue

- † A. Auto Stay Arm (event 04) and Auto Away Arm (event 5) cannot be used if partition 3 is set as a common partition. To use these scheduling features, field *30 must be 0, making partition 3 a separate partition.
 - B. When using Auto Stay Arm (event 04) or Auto Away Arm (event 05), the system will automatically bypass any open burglary zone when its arms at the scheduled time.

IMPORTANT: Zones left unintentionally open will be unprotected.

DEVICE NUMBER

XX

Х

This prompt appears if event "1" (relay on/off) was selected, otherwise it is skipped.

Enter the physical device number as programmed in *79 Menu Mode, then press [*] to continue to the "Start" prompt.

Device numbers 17 and 18 designate built-in triggers 1 and 2 respectively.

01-18 = device number

[*] to continue

GROUP NUMBER

This prompt appears if event "2" (user access) was selected. Otherwise it is skipped.

1-8 = group number

[*] to continue to the "Start" prompt.

PARTITION

This prompt appears if events "3-7, or 10" were selected. Otherwise it is skipped.

0 = all partitions; 1 = partition 1; 2 = partition 2; 3 = partition 3

[*] to continue

START SMTWTFS HH MMAM 0010000 Enter the event's start time and days of the week to occur.

To select days, position the cursor under the desired days using the [*] key to move forward, then press "1" to select the day.

01-12 (00-23) = hour (use 00-23 if 24-hour time is enabled)

00-59 = minute0 = AM; 1 = PM

Days = place "1" under days

[*] to continue

WARNING DLY TIME
00

This prompt appears if events "4 or 5" were selected.

Enter the desired amount of time the system should warn of impending arming. The system will beep once every 30 seconds to alert users that arming will soon occur. Otherwise, this prompt is skipped.

01-15 = minutes of arm warning delay time

[*] to continue

STOP SMTWTFS HH MMAM 0010000 Enter the event's stop time and days of the week to occur.

To select days, position the cursor under the desired days using the [*] key to move forward, then press "1" to select the day.

This entry applies only to the following events: 1 (relay on/off); 2 (user access); 3 (child-not-home report)

01-12 (00-23) = hour (use 00-23 if 24-hour time is enabled)

00-59 = minute 0 = AM; 1 = PM

Days = place "1" under days

[*] to continue

REPEAT OPTION
0-4 X

Enter the desired repeat option for this schedule.

e.g., To make a schedule that happens everyday you would select all days with a repeat count of 1. To make a schedule that runs for one week then stops, select everyday with a repeat count of 0.

NOTE: Schedules run sequentially from Sunday to Saturday and reset on Sunday at midnight. If repeat count is 0, only those events scheduled from the day the schedule is set to Sunday will occur. Events scheduled after Sunday will be ignored.

0 = do not repeat

1 = repeat schedule weekly

2 = repeat schedule biweekly (every other week)

3 = repeat schedule every third week

4 = repeat schedule every fourth week

[*] to continue

RANDOMIZE 0=NO 1=YES X If selected, the scheduled start and stop times will vary within 60 minutes of the "hour" time. For example, if a schedule is set to start at 6:15pm, it will do so the first time 6:15pm arrives, but on subsequent days it will start anytime between 6:00 and 6:59 p.m.

NOTE: Do not use the random option if the start and stop times are within the same "hour" setting, otherwise unpredictable results may occur (e.g., the randomized stop time may occur before the start time).

0 = no

1 = yes

[*] to continue

WARNING THE LIMITATIONS OF THIS ALARM SYSTEM

While this System is an advanced design security system, it does not offer guaranteed protection against burglary, fire or other emergency. Any alarm system, whether commercial or residential, is subject to compromise or failure to warn for a variety of reasons. For example:

- Intruders may gain access through unprotected openings or have the technical sophistication to bypass an alarm sensor or disconnect an alarm warning device.
- Intrusion detectors (e.g., passive infrared detectors), smoke detectors, and many other sensing devices will not work without power. Battery-operated devices will not work without batteries, with dead batteries, or if the batteries are not put in properly. Devices powered solely by AC will not work if their AC power supply is cut off for any reason, however briefly.
- Signals sent by wireless transmitters may be blocked or reflected by metal before they reach the alarm receiver. Even if the signal path has been recently checked during a weekly test, blockage can occur if a metal object is moved into the path.
- · A user may not be able to reach a panic or emergency button quickly enough.
- While smoke detectors have played a key role in reducing residential fire deaths, they may not activate or provide early warning for a variety of reasons in as many as 35% of all fires. Some of the reasons smoke detectors used in conjunction with this System may not work are as follows. Smoke detectors may have been improperly installed and positioned. Smoke detectors may not sense fires that start where smoke cannot reach the detectors, such as in chimneys, in walls, or roofs, or on the other side of closed doors. Smoke detectors also may not sense a fire on another level of a residence or building. A second floor detector, for example, may not sense a first floor or basement fire. Finally, smoke detectors have sensing limitations. No smoke detector can sense every kind of fire every time. In general, detectors may not always warn about fires caused by carelessness and safety hazards like smoking in bed, violent explosions, escaping gas, improper storage of flammable materials, overloaded electrical circuits, children playing with matches, or arson. Depending on the nature of the fire and/or location of the smoke detectors, the detector, even if it operates as anticipated, may not provide sufficient warning to allow all occupants to escape in time to prevent injury or death.
- Passive Infrared Motion Detectors can only detect intrusion within the designed ranges as diagrammed in their installation manual. Passive Infrared Detectors do not provide volumetric area protection. They do create multiple beams of protection, and intrusion can only be detected in unobstructed areas covered by those beams. They cannot detect motion or intrusion that takes place behind walls, ceilings, floors, closed doors, glass partitions, glass doors, or windows. Mechanical tampering, masking, painting or spraying of any material on the mirrors, windows or any part of the optical system can reduce their detection ability. Passive Infrared Detectors sense changes in temperature; however, as the ambient temperature of the protected area approaches the temperature range of 32° to 40°C, the detection performance can decrease.
- Alarm warning devices such as sirens, bells or horns may not alert people or wake up sleepers if they are located on the other side of closed or partly open doors. If warning devices are located on a different level of the residence from the bedrooms, then they are less likely to waken or alert people inside the bedrooms. Even persons who are awake may not hear the warning if the alarm is muffled by noise from a stereo, radio, air conditioner or other appliance, or by passing traffic. Finally, alarm warning devices, however loud, may not warn hearing-impaired people.
- Telephone lines needed to transmit alarm signals from a premises to a central monitoring station may be out of service or temporarily out of service. Telephone lines are also subject to compromise by sophisticated intruders.
- Even if the system responds to the emergency as intended, however, occupants may have insufficient time to protect themselves from the emergency situation. In the case of a monitored alarm system, authorities may not respond appropriately.
- This equipment, like other electrical devices, is subject to component failure. Even though this equipment is designed to last as long as 10 years, the electronic components could fail at any time.

The most common cause of an alarm system not functioning when an intrusion or fire occurs is inadequate maintenance. This alarm system should be tested weekly to make sure all sensors and transmitters are working properly. The security keypad (and remote keypad) should be tested as well.

Wireless transmitters (used in some systems) are designed to provide long battery life under normal operating conditions. Longevity of batteries may be as much as 4 to 7 years, depending on the environment, usage, and the specific wireless device being used. External factors such as humidity, high or low temperatures, as well as large swings in temperature, may all reduce the actual battery life in a given installation. This wireless system, however, can identify a true low-battery situation, thus allowing time to arrange a change of battery to maintain protection for that given point within the system.

Installing an alarm system may make the owner eligible for a lower insurance rate, but an alarm system is not a substitute for insurance. Homeowners, property owners and renters should continue to act prudently in protecting themselves and continue to insure their lives and property.

We continue to develop new and improved protection devices. Users of alarm systems owe it to themselves and their loved ones to learn about these developments.

LIMITED WARRANTY

Honeywell International Inc., acting through its Security & Custom Electronics business ("Seller") 165 Eileen Way, Syosset, New York 11791, warrants its product(s) to be in conformance with its own plans and specifications and to be free from defects in materials and workmanship under normal use and service for 24 months from the date stamp control on the product(s) or, for product(s) not having a manufacturer's date stamp, for 12 months from date of original purchase unless the installation instructions or catalog sets forth a shorter period, in which case the shorter period shall apply. Seller's obligation shall be limited to repairing or replacing, at its option, free of charge for materials or labor, any product(s) which is proved not in compliance with Seller's specifications or proves defective in materials or workmanship under normal use and service. Seller shall have no obligation under this Limited Warranty or otherwise if the product(s) is altered or improperly repaired or serviced by anyone other than Honeywell factory service. Connection of any device(s) to a communicating bus of a Honeywell security system (e.g., keypad bus, polling loop) other than those manufactured or approved by Honeywell shall void this warranty. For warranty service, return product(s) transportation prepaid, to Honeywell Factory Service, 165 Eileen Way, Syosset, New York 11791.

THERE ARE NO WARRANTIES, EXPRESS OR IMPLIED, OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. IN NO CASE SHALL SELLER BE LIABLE TO ANYONE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES FOR BREACH OF THIS OR ANY OTHER WARRANTY, EXPRESS OR IMPLIED, OR UPON ANY OTHER BASIS OF LIABILITY WHATSOEVER, EVEN IF THE LOSS OR DAMAGE IS CAUSED BY THE SELLER'S OWN NEGLIGENCE OR FAULT.

Seller does not represent that the product(s) it sells may not be compromised or circumvented; that the product(s) will prevent any personal injury or property loss by burglary, robbery, fire or otherwise; or that the product(s) will in all cases provide adequate warning or protection. Customer understands that a properly installed and maintained alarm system may only reduce the risk of a burglary, robbery, fire, or other events occurring without providing an alarm, but it is not insurance or a guarantee that such will not occur or that there will be no personal injury or property loss as a result. CONSEQUENTLY, SELLER SHALL HAVE NO LIABILITY FOR ANY PERSONAL INJURY, PROPERTY DAMAGE OR OTHER LOSS BASED ON A CLAIM THAT THE PRODUCT(S) FAILED TO GIVE WARNING. HOWEVER, IF SELLER IS HELD LIABLE, WHETHER DIRECTLY OR INDIRECTLY, FOR ANY LOSS OR DAMAGE ARISING UNDER THIS LIMITED WARRANTY OR OTHERWISE, REGARDLESS OF CAUSE OR ORIGIN, SELLER'S MAXIMUM LIABILITY SHALL NOT IN ANY CASE EXCEED THE PURCHASE PRICE OF THE PRODUCT(S), WHICH SHALL BE THE COMPLETE AND EXCLUSIVE REMEDY AGAINST SELLER.

This warranty replaces any previous warranties and is the only warranty made by Seller on this product(s). No increase or alteration, written or verbal, of the obligations of this Limited Warranty is authorised.
