*SecurityCommand* ®
EXECUTIVE SERIES

Model 670, 770 and 771
Security Command® Keypads

Description

The DMP 670, 770, and 771 Security Command® keypads provide an attractive, user friendly control with three optional 2-button Panic keys for use with DMP Command Processor™ Panels. Each keypad also provides supervised or unsupervised operation, an easily readable 16 character fluorescent blue display, AC LED, backlit keyboard, low profile styling, and six designer colors to compliment a variety of room decors.

2-Button Panic Keys

The 670, 770, and 771 keypads allow the top row of keys to be used as 2-button Panic keys. This feature lets the user press and hold two keys simultaneously to send a Panic, non-medical Emergency, or Fire report to the central station. A label is provided to identify the correct keys.

Top row Select keys

Panic   Emergency   Fire

Label shows icons only.

Supervised and Unsupervised Operation

Both keypads also allow you to set unsupervised addresses and connect multiple keypads to any of the panel's available keypad addresses. This feature greatly expands the number of keypads that can be installed to give users the maximum flexibility in operating their system. The unsupervised operation works on all DMP panels.

Four Additional Protection Loops

The DMP 770 and 771 Security Command® provides four programmable Class B protection loops for connecting devices directly to the keypad. These loops can be individually programmed with any loop type. The 770 and 771 are recommended for supervised operation when devices are connected to their protection loops.

The DMP 670 keypad is identical to the 770 but does not contain the four programmable protection loops.

Listings and Approvals

- UL listed

The 670, 770, and 771 Security Command® keypads are listed by UL for use with all DMP Command Processor™ panels. Refer to the appropriate Command Processor™ UL Application Document for complete information.
