# 1114 Wireless Four-Zone Expander

# **Description**

The 1114 Wireless Four-Zone Expander increases the number of reporting zones available on DMP Command Processor™ Panels. Use the four zones with burglary or other non-powered devices. The 1114 is designed to operate on one CR123A battery or connect to an optional 12 VDC power supply.

The 1114 operates with the XR500 or XR100 Series Command Processor<sup>™</sup> panels version 119 using the 1100X Wireless Receiver version 104 or with the XRSuper6, XR20, and XR40 Command Processor<sup>™</sup> Panels version 304 using the 1100D Wireless Receiver version 104.

#### What is included

The 1114 includes the following:

- One 1114 Wireless Four-Zone Expander
- One 3.0V Lithium CR123A battery
- Hardware pack with 470k EOL Resistors
- Serial number label

Optional items available:

- One Model 376 DC Power Supply
- One Model 378 Barrel Connector with Cord

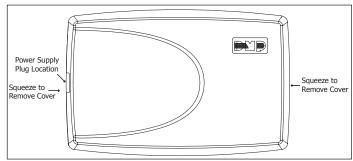

Figure 1: 1114 Wireless Four-Zone Expander

#### **Serial Number**

For your convenience, an additional pre-printed serial number label is included. Prior to installing the zone expander, record the serial number or place the pre-printed serial number label on the panel programming sheet. This number is required during programming.

# **Programming the 1114 in the Panel**

Program the 1114 Wireless Four-Zone Expander as a zone in Zone Information. At the Serial Number: prompt, enter the eight-digit serial number. Continue to program the zone as directed in the panel programming guide. Refer to the XR500 Series Programming Guide (LT-0679), the XR100 Series Programming Guide (LT-0896), or the XRSuper6/XR20/XR40 Programming Guide (LT-0305) as needed.

**Note:** When a receiver is installed, powered down and powered up, the panel is reset, or programming is complete, the supervision time is reset. If the receiver has been powered down for more than one hour, the 1114 may take up to an additional hour to send a supervision message unless tripped, tampered, or powered up. This operation extends battery life. A missing message may display on the keypad until the supervision message is sent.

# **Selecting the Proper Location (LED Survey Operation)**

The 1114 provides a survey capability to allow one person to confirm communication with the receiver while the cover is removed. The 1114 PCB Red Survey LED (See Figure 2) turns on whenever data is sent to the receiver then immediately turns off when the receiver acknowledgement is received. Pressing the tamper switch is a convenient way to send data to the receiver to confirm operation. When the 1114 does not receive an acknowledgement from the receiver the survey LED remains on for about 8 seconds to let you know communication is not established. Communication is also faulty when the LED flashes multiple times in quick succession. Relocate the 1114 or receiver until the LED immediately turns off indicating the 1114 and receiver are communicating properly. Proper communication between the 1114 and receiver is verified when for each press or release of the tamper switch, the LED blinks immediately on and immediately off.

# **Installing the 1114**

Mount the 1114 on a flat surface such as a wall or single-gang box. When using the optional Model 376 plug-in power supply, mount the 1114 near a wall outlet. See Figure 2 for mounting hole locations.

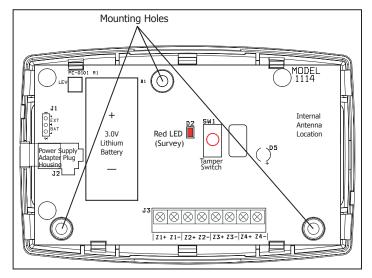

Figure 2: 1114 Four-Zone Expander PCB

# 1114 Zone Wiring

It is recommended to locate zone devices within 100 feet of the 1114 zone expander. Use 22 or 18 AWG wire to complete the connections between the 1114 zone expander Zones 1 through 4 and each field device. Each zone terminates with one of the included 470k EOL resistors as shown.

Figure 3: 1114 Zone Terminals

# Powering the 1114

The 1114 can be powered by:

- CR123A 3.0 VDC battery
- Model 376 plug-in power supply
- 12 VDC Power Supply

Note: When setting up a wireless system, it is recommended to program zones and connect the receiver before installing batteries in the 1114 or connecting the optional power supply.

#### **Battery Power**

Observe polarity when installing the battery. Use only 3.0V Lithium batteries, DMP Model CR123, or the equivalent battery from a local retail outlet. Do not connect the power supply when operating using battery power.

- 1. Squeeze the cover left and right sides together to remove. See Figure 1.
- 2. Install the supplied jumper on the two J1 pins next to BAT to enable battery operation.

Note: Battery operation is not enabled if the jumper is on the J1 pins next to EXT.

- 3. If replacing the battery, remove the old battery and dispose of it properly.
- 4. Place the 3.0V Lithium battery in the holder and press into place. See Figure 4 for Battery location.
- 5. Snap the cover back into place.

**Caution:** Properly dispose of unused batteries. Do not recharge, disassemble, heat above 212°F (100°C), or incinerate. Risk of fire, explosion, and burns.

Digital Monitoring Products 1114 Installation Guide

#### **Battery Life Expectancy**

Typical battery life expectancy for the 1114 is three years. Refer to the XR500 Series Programming Guide (LT-0679), XR100 Series Programming Guide (LT-0896), or the XRSuper6/XR20/XR40 Programming Guide (LT-0305) as needed. DMP wireless equipment uses two-way communication to extend battery life.

The following situation can extend battery life expectancy:

• Extend transmitter supervision time in panel programming.

The following situations can reduce battery life expectancy:

• If a receiver is unplugged or not installed.

**Note:** Transmitters continue to send supervision messages until a receiver returns an acknowledgement. After an hour the transmitter only attempts a supervision message every 60 minutes.

• When installed in extreme hot or cold environments.

### **Optional External DC Plug-in Power Supply**

When using the optional Model 376 plug-in DC power supply, mount the 1114 near a wall outlet. Do not install a

battery when operating using the plug-in power supply. The power supply does not charge the battery.

Use the following steps to connect the plug-in power supply:

- 1. Squeeze the left and right cover sides together to remove. See Figure 1.
- 2. Install the supplied jumper on the two J1 pins next to EXT to enable power supply operation.

**Note:** Power supply operation is not enabled if the jumper is on the J1 pins next to BAT.

- 3. Snap the cover back into place.
- 4. Plug the barrel connector into the J2 barrel jack at the side of the 1114 cover. See Figure 4.
- 5. Plug the Model 376 power supply into a 110 Volt AC outlet.

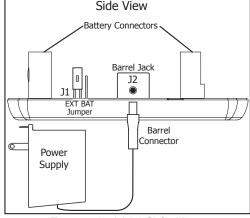

Figure 4: 1114 Side View

#### **Optional External 12 VDC Power Supply**

The 1114 can also be powered from a 12 VDC power supply such as a DMP Model 502-12. Use DMP Model 378 barrel connector with cord, or the equivalent  $5.5 \times 2.1$  mm barrel connector from a local retail outlet and 22 AWG wire to connect to the power supply. Do not install a battery when operating using the external power supply. The power supply does not charge the battery.

Use the following steps to connect the power supply:

- Squeeze the left and right cover sides together to remove.
   See Figure 1.
- 2. Install the supplied jumper on the two J1 pins next to EXT to enable power supply operation.

**Note:** Power supply operation is not enabled if the jumper is on the J1 pins next to BAT.

- 3. Snap the cover back into place.
- 4. If using the Model 378, connect the Black wire with White stripe to the J6 positive terminal on the 502-12 power supply PCB and the Black wire to the J6 negative terminal.
- 5. Plug the Model 378 barrel connector into the J2 barrel jack at the side of the 1114 cover. See Figure 4.

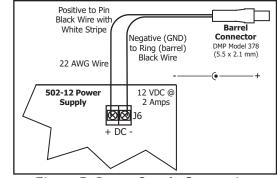

Figure 5: Power Supply Connection

- 6. If installing a purchased 5.5 x 2.1 mm barrel connector, use 22 AWG wire to connect the positive wire to the pin and negative wire (GND) to the ring (barrel). See Figure 5.
- 7. Connect the 22 AWG wire ends to the J6 DC connector on the 502-12 power supply PCB. Observe positive and negative polarity on all connections.
- 8. Plug the barrel connector into the J2 barrel jack at the side of the 1114 cover. See Figure 4.

#### **FCC Information**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

The antenna used for this transmitter must be installed to provide a separation distance of at least 20 cm (7.874 in.) from all persons. It must not be located or operated in conjunction with any other antenna or transmitter.

Changes or modifications made by the user and not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

## **Specifications**

Battery

Life Expectancy 3 years

Type 3.0V Lithium CR123A See Battery Life Expectancy for full details.

Frequency Range 903-927 MHz

Dimensions 4.65" L x 3.1" W x 1.4" H

Color White

Housing Material Flame retardant ABS

#### Accessories

CR123 DMP 3.0V Lithium Battery
376 DC Plug-in Power Supply
378 Barrel Connector with Cord
502-12 12 VDC Power Supply

#### Compatibility

The 1114 Wireless Zone Expansion Transmitter is compatible with:

XR500 or XR100 panels version 119 1100X Wireless Receiver version 104

XRSuper6, XR20, and XR40 panels version 304  $\,$ 

1100D Wireless Receiver version 104

#### **Patents**
