

Unfortunately

Your Security System is only 99% Complete

SKYROUTETM Wireless Communications

- The SKYROUTETM CellemetrySM transmitter uses the existing cellular network to provide reliable and cost effective wireless communication for your security system.
- Standard telephone land lines are vulnerable to weather, construction, repairs or intentional tampering.
- The SKYROUTETM transmitter uses the airwaves to send signals to your monitoring facility.

- Transmission to the central station occurs in under one second.
- SKYROUTETM installs directly into your alarm control panel.
- In the case of power failure, SKYROUTETM will continue to function on battery power provided by the alarm control panel.

Let SKYROUTETM Complete This Picture

Wireless Communications

Rely on proven technology to protect what you value most

Sending Signals

The SKYROUTE™ Cellemetry™ transmitter by SG Security Communications uses the existing cellular network to provide reliable and cost effective digital communication for your security system. Everyday, more and more people use cellular telephones to keep in touch with the world around them. Your cellular phone is a convenience and more importantly it provides you with a sense of safety and security knowing that you can always remain linked to the people that mean the most to you. Cellemetry is a breakthrough technology that utilizes the cellular control channel to send information to your monitoring facility.

Phone Line Loss

Standard phone lines are vulnerable. Communication is dependent on miles of copper cable placed in or above the ground. Many factors can affect your phone system, bad weather, construction work, accidental line cuts or even intentional line cuts by an intruder. The loss of your phone line will inconvenience you and compromise the communication from your security system. Since SKYROUTE™ is cellular, it uses airwaves rather than standard telephone lines to send information, and therefore still functions in the event of telephone line loss. SKYROUTE™ is also connected to your security system battery, so that in the event of a power failure, the unit will still communicate allowing you to keep in touch with the monitoring station.

Safeguard What You Value Most

In the event of a burglary, forced entry, fire or medical emergency, SKYROUTE™ will give you and your family an unprecedented level of safety and security. SKYROUTE™ is a wireless solution to all of your needs.
