# LCD600 KEYPAD PROGRAMMING

To enter LCD keypad programming mode type ✶ 6 [installer code], press either scroll key to enter LCD programming.

You will see  "LCD PGM Mode Enter Selection, enter the zone number you want to program labels for.
On a PC 3000 press 01 through 16
On a PC 2550 press 01 through 08
On a PC 2500 press 01 through 08
On a PC 1500 press 01 through 06

The cursor will appear under the first character.  To move the cursor left or rights press the 1 key (left) or the 3 key (right).

Use the arrow keys to scroll up and down to find the desired character, use the 4 key to toggle UPPER or lower case. Maximum length of each label is 12 characters.

The 2 key inserts a space wherever the cursor is, you can add a space between words, create a space in a word in case of a spelling error etc.

The 5 and 6 keys are the delete keys, used to delete any character the cursor is under.

Pressing the ✶ key will abort the edit and return to the "Enter Selection" screen.

The 0 key deletes the entire line.

If you press oo at the "LDC PGM Mode Enter Selection screen you can edit the panic key options. If a 0 shows all panic keys are disabled, if 1 2 3 4 are on all options are enabled, a 1 showing means the Fire panic key is enabled, 2 means the Emergency/Medical key is enabled, 3 means the Police key is enabled, light 4 should be on if the panel is programmed with "Display Shunted Zones While Armed option is selected.

To program the Utility Output section at the "Enter Selection" prompt press 1 7 and you can program the label for the utility output (✶ 7). Most of the time you can program this to say "Smoke Reset".
