Note: The switch rating is 3 amps @ 30 Volts AC/DC

- Denotes solder connection

ADT-BG-10, ADT-BG-10L

Description

The **ADT-BG-10** is a non-coded, dual-action, normally-open manual pull station. The **ADT-BG-10L** provides all of the functions of the ADT-BG-10 and includes the option of a key for reset.

ADT-BG-10 Series Operation

When the dual-action door is pushed in and the handle pulled down, the N.O. push-type switches will close. The handle cannot be restored to its normal position until the station is manually reset by unscrewing the hex screw and pivoting the case downward, away from the backplate. When the handle is restored, return the case to its normal position and secure with the hex screw. The ADT-BG-10L utilizes a mechanical key instead of a hex screw.
