ECN 98-243

Installation in a BB-25 Cabinet

Installation in a CAB-3 Series Cabinet (in this case a CAB-D3 Cabinet)

The CHS-6 Chassis is shipped with two hex nuts, which are used to fasten the chassis to the PEM studs on the back wall of the cabinet.

The CHS-6 Chassis fits into the BB-25 cabinet and the CAB-3 Series cabinets, A-size through D-size. The chassis can fit into any of the CAB-3 Series cabinet rows except for the bottom row, which was designed for battery housing and does not have PEM studs for mounting.
