

BRKT-ACC Bracket Product Installation Drawing

Document 52074 Rev A 5/20/03 ECN 02-056

The BRKT-ACC module mounting bracket can be used to install an addressable module such as the MMF-302-6, CMF-300-6 or CRF-300-6. It can also be used to convert an existing Audio•Command•Center•25/50 (ACC-25/50) audio panel to an Audio•Command•Center•25/50ZS zone splitter panel. Installation of the bracket can be easily accomplished using the supplied components.

CAUTION! Remove all power (AC and DC) before installing the BRKT-ACC bracket since it will be installed in proximity to the power transformer.

BRKT-ACC Bracket Installation

1. Make certain that AC power has been removed from the panel.
2. Unplug the transformer from connector P7 located in the bottom left of the main circuit board.
3. Position the BRKT-ACC bracket near the mounting position in the backbox and thread the transformer connector through the large opening in the back of the bracket.
4. Slide the two tabs on the right side of the BRKT-ACC into the slots in the ACC-25/50 backbox.
5. Secure the bracket to the five threaded studs on the backbox with the supplied washers and nuts.
6. Install the appropriate option modules on the bracket and wire as instructed in the documents supplied with the modules.
7. Reconnect the transformer to connector P7.
8. Reapply power (AC and DC) to the panel.
