HAI Web-Link™

HAI Web-Link Demo Version

Below is a summary of the current system status.

Description	Status
System Information	
Security	Armed Night
Date	8/8/99
Time	9:08:47 PM
Sunrise	5:54:00 AM
Sunset	8:30:00 PM
Temperature	
Downstairs Thermostat	70° F
Upstairs Thermostat	72° F
Outdoor Temp	64° F
Currently Displayed Messages	

Home Automation, Inc. Web-Link Update

Status: System OK

Home Automation, Inc. is proud to introduce HAI Web-Link - a great new way to access your HAI system on you home PC and also via the Internet! With the click of a mouse, HAI Web-Link users can access their property using MS Internet Explorer or Netscape Navigator. HAI Web-Link allows users to adjust settings for lighting, heating and air, security and appliances using the familiar "point and click" friendliness of software for Windows.

HAI Web-Link will work inside a home on a single PC, and with a group of PCs on a local network. It also takes advantage of the full-time Internet connection provided by increasingly popular cable modems, ADSL and other technologies. These connections, combined with Web-Link's intuitive, easy to use pages make it quick and easy to check on the house, the kids and adjust the heat - right from your office PC.

HAI Web-Link runs in the background on a Windows 95, 98 or NT computer connected to any HAI Omni-class controller. HAI Web-Link software generates Web pages for the controller's data that can be viewed locally and on any networked computer via Internet or Local Area Network. After installing HAI Web-Link, no set up is required: HAI Web-Link smart software obtains its configuration from the HAI controller, and develops the appropriate menu formatted pages automatically.

To demo HAI Web-Link and find out about other solutions for your home please visit HAI on the web...
