TECHNICAL BULLETIN
#209234

SAFETY NOTICE - UL REQUIREMENT

For all UL fire/burglary or medical alert installations, the CP-90 control panel's cabinet door must be grounded. Use the enclosed green grounding wire assembly and refer to the figure below to ground the CP-90 cabinet door.
Slide the push-on lug onto the middle door hinge tab and connect the spade lug to the CP-90 EARTH GROUND terminal.

If the door is removed for servicing the CP-90, the push-on lug should be removed with needle nose pliers by squeezing and rocking the base of the push-on lug. **DO NOT REMOVE THE PUSH-ON LUG BY PULLING ON THE GREEN WIRE.**

   ✶ *WARNING: When servicing the CP-90, be careful that the grounding wire lug does not contact any other wires or components inside the CP-90. Damage may result to the CP-90 if the ground wire contacts live circuits.*

After servicing the panel, replace the push-on lug onto the middle door hinge tab.
