**CP-90
PROGRAMMING INSTRUCTIONS
ADDENDUM
212331**

Page 44:

ADD: 121.006 Causes an entry delay #1 (Function 120.001) to start when any keypad key is pressed if the system is armed in Level 4 (away mode). This feature is useful in installations where someone might try to compromise the system by staying inside the secured premises. The default Value of 0 disables this feature. Enter a Value of 1 if keypad burglary for lock-in is required.

Page 44:

ADD: 121.016.000 to Note, "...as an Interior Burg/Intrusion."

The following items are for the correction and upgrading of the **CP-90 Programming Instructions (Linear P/N: 208254 C)**.
