C900V2 Now Available – ***The Solution*** for Voice-over-IP alarm communication

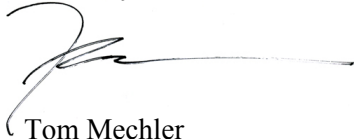

C900V2 provides reliable, high-speed IP communications for virtually any existing alarm panel. This *increases security and reliability*, can *lower costs* and *simplifies operation* since it does not require the end user to learn a new system when converting from standard telephone lines to IP communications.

The C900V2 is a module that converts telephone-based alarm communicators to Internet protocol (IP) communications. This provides a solution for alarm owners who have switched from standard telephones to Voice over IP, for those who replace their wired phones with mobile phones, and for businesses who share their business phone with their alarm system.

C900V2 is simple to install, uses reliable field-proven technology and is the most convenient solution for end user.

This booklet includes the tools and information you will need to successfully introduce the C900V2 to your customers. Please refer to the contents section and, if you have any questions, feel free to contact your Regional Sales Manager or call Bosch at 800-289-0096.

Sincerely,

Tom Mechler
Product Marketing Manager
Bosch Security Systems, Inc.

C900V2 is the best choice for IP alarm communications

- Convert virtually any alarm panel to IP
- Quickly and easily eliminate voice over IP communication issues
- Reduces Installation Time
- Requires no end user re-training
- High speed, high security greater convenience
- Full data – not just a few select events
