Installing a New Default Operator file
Article ID: RKKB0010
Revision Date: 22-AUG-1997

```
The information in this article applies to:

*  Readykey for Windows Versions 1.5, 2.1 and 3.X
*  Microsoft Windows 3.X and 3.11
*  Microsoft Windows for Workgroups 3.11
*  Microsoft Windows 95
```

General

- This document outlines how to replace the existing operator records with the "Default Operator" record that contains one operator.
- It may be necessary to do this if the logins have been forgotten or all authority levels are too low to properly administer the system.
- At any time during this process you need assistance, please call Readykey Technical Support at 1-800-538-5807.

Process

A. Close the Readykey for Windows. (This may require you to reboot the PC if you cannot close the login screen.)

B. Go to **Main: File Manager** or **Start: Programs: Windows Explorer**.

C. Find the directory titled **RKEYWIN** and highlight it with your mouse.

D. Rename **RKEYWIN** to **RKEYOLD**.

E. Install a Standalone copy of Readykey for Windows. Ensure you install the same version of this program that is running on this machine. Install the software in the default directory of **C:\RKEYWIN**.

F. Go back to **Main: File Manager** or **Start: Programs: Windows Explorer**.

G. Click on **RKEYWIN**. Click on **DATA**. Click on **BOPERATR.DAT**. Copy **BOPERATR.DAT** to **RKEYOLD\DATA**.

H. Click on **RKEYWIN**. Click on **DATA**. Click on **BPRIVS.DAT**. Copy **BPRIVS.DAT** to **RKEYOLD\DATA**.

I. Find the directory of **RKEYWIN** and highlight it with your mouse.

J. Rename **RKEYWIN** to **RKEYNEW**.

K. Find the directory of **RKEYOLD** and highlight it with your mouse.

L. Rename **RKEYOLD** to **RKEYWIN**.

M. Exit File Manager or Windows Explorer.

N. Start Readykey for Windows. Login as "*GUEST*" tab "*GUEST*".

O. Re-enter all the operator information as needed.
