with full data

## Cellular Alarm Communicator

residential

small business

commercial

fire

***FCC Sunset Clause will no longer require wireless carriers to support the analog network (AMPS) after February 2008***

- Eliminate Equipment Change Out
- UL Primary or Back up Alarm Communicator
- Full Data Reporting
- Economical Cellular Service

Telular takes security data transmission to a new level with Telguard Digital. These advanced generation products transmit full data from virtually all security and fire systems to central stations using the nationwide GSM digital cellular network.

Telguard Digital provides primary and back-up cellular alarm communication solutions for residential, small business, financial, commercial and fire system markets.

## Ensuring alarm transmission when the telephone line or data network is not in service

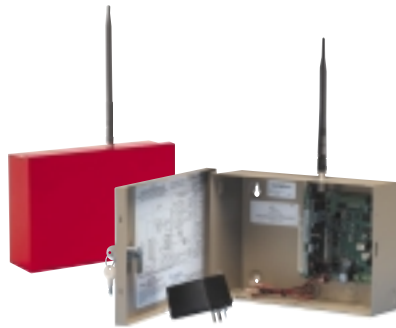

Telguard Digital transmits alarm signals over the digital GSM cellular network when the telephone line has been disrupted, compromised, or if no wireline service is used.

Telguard Digital uses advanced encryption technology for secure communications and maximum dual-band transmitting power for superior in-building penetration.
