THE COMMANDER 3000 HOME SECURITY SYSTEM

Although news reports of crime and violence have most people alarmed, so does the cost of most security systems. Fortunately, there's an economical solution and it's better than ever. One of the world's

## AFFORDABLE SECURITY

most popular wireless security systems is now even more advanced. Yet it's still very affordable.

THE COMMANDER® 2000 is so sophisticated it actually talks.

Arm the system and a digitized voice

**With A Wealth Of  
Advanced Features**

reassures you when you've done it

correctly. It also tells you if a door or window has been

opened and indicates which one. Plus it warns of any

trouble conditions. To operate, simply enter your four-digit

secret code and press the appropriate buttons. It's easy and reliable. And the Command Button makes it

even easier. It allows you to perform many functions without entering the code.

## Technology

### To The Rescue

Tiny, wireless sensors blanket your home with top security. Door and window sensors detect intruders immediately. Motion sensors provide a strong second line of defense, while smoke and heat detectors warn you at the first sign of fire. Controlling them all is the system's Central Processing Unit—it uses the same type of digital microprocessor many computers use. The Commander 3000 really stands out in an emergency. When there's an alarm, it sounds a siren, turns on the lights and sends an electronic signal to trained personnel at the Central Monitoring Station. They send proper authorities speeding to your aid. The Commander 3000 also pinpoints the exact location of the emergency so police or firefighters go right where they're needed. This saves precious time and it could save lives.

Whenever there's a break-in, the lights in your home flash to help scare the intruder away. In a fire, the lights stay on to help your family get out safely.

if you want peace of mind, the Commander 3000 gives it to you. With its reliable detection and quick response, help is on the way in any emergency.

Keychain touchpads and portable panic buttons put the security of your home at your fingertips.

The professional staff at the Central Monitoring Station receives the emergency signal and notifies authorities at once.

Help is on the way. Within seconds, police or firefighters are speeding toward your home, thanks to the quick detection and rapid response of the Commander 3000.

## Exceptional Features And Options

**CENTRAL PROCESSING UNIT** constantly monitors wireless signals from detection sensors placed throughout your home. In the event of an emergency, it will activate the sirens and transmit the alarm message to the Central Monitoring Station.

**CONTROL SECTION** allows you to select protection levels, activate lights and test your system.

**ALARM SECTION** when depressed, will sound the alarm and automatically send a request for the police, fire department or other assistance.

**COMMAND BUTTON** can only be used to increase the level of protection.

**PANIC BUTTONS.** Just press in an emergency. The signal goes out and help is on the way.

**TWO ENTRANCE DELAYS.** You won't have to scramble to turn off the alarm because you can set one delay for the garage door and another for your house.

**LIGHT CONTROL MODULES.** This optional feature controls inside and outside lights so you're never stumbling around in the dark.

**REMOTE SERVICE.** Special "smart circuitry" allows many service tasks to be performed over the phone—without delay and without expensive on-site service calls.

**LEARN MODE TECHNOLOGY.** Your system has a unique ID code so neighboring alarm signals don't affect your system's performance.

**VISITOR CODE.** You can let service people in when you're away and then change the code to maintain security.

**CHIME MODE.** When the alarm is off, you can still keep track of children going in and out. A pleasant tone sounds whenever a door or window is opened.

**ALARM MEMORY.** If an emergency occurs while you're away, the system's voice will tell you what happened and where.

### DOOR/WINDOW SENSORS

detect opening of doors and windows. Special sensors detect the shattering of glass and the splintering of wood.

### MOTION SENSORS

identify body heat to detect intruders. They're adjustable so pets can move about freely.

### SMOKE SENSORS

provide fire protection around the clock. Be sure to have one on every level of your home.

### PANIC BUTTONS

ensure that the safety of your home is in your hands.

Never before have such extensive capabilities been available in this price range. Now that the high cost of security is under arrest, it's high time that you took Command over crime. With the high-tech, low-cost Commander 3000.
