

# Concord Express w/ Interrogator

The Interrogator trip on the Express panel was designed to make it an easy installation for the tech. The Interrogator should work, out of the box, just the same as the Commander 2000. Using the trip 018, the panel sends a 2-way signal to the Central Station. It will only work with Instant activation. The Trip form the panel should be configured on output 2 as 01800.
