

Dialog RF Electronic Thermostat

Convenient Temperature Control Through Your Security System

Overview

The Dialog RF Electronic Thermostat provides a money-saving and convenient way to monitor and control temperatures by integrating heating and cooling features into a security system. The security system panel and the thermostat communicate via a two-way wireless communications link. When the panel is armed or disarmed, it signals the thermostat to adjust temperature limits accordingly. The thermostat uses low and high temperature limits to save energy. Temperature limits set in the panel determine when the heat or air conditioning turns on.

For example, if the RF Thermostat's high limit (Cooling Set Point) is set to 80°F, it prevents the air conditioner from turning on until the temperature exceeds 80°F. If the RF Thermostat's low limit (Heating Set Point) is set to 70°F, it prevents the furnace from turning on until the temperature drops below 70°F.

The Dialog RF Electronic Thermostat is compatible with Simon® 3 panels versions 3.3 and later.

Applications

- When you want to control your heating and cooling systems through your security system panel

Standard Features

- Low and high temperature limits to save energy
- Temperature adjusts automatically when Simon 3 is armed to away. There is no need to program complicated schedules.
- Programmed locally or through your Simon 3 panel
- Temperature, day and time display

Specifications

Compatibility:

- Simon 3 version 3.3 or later

Dimensions

- 3.6 x 1.2 x 5.4 in. (W x D x H) 37 x 45.8 x 7.8 cm

Operating Temperature

- 32° F to 120° F (0° C to 49° C)

Power Requirements

- Powered from the HVAC transformer
