

The **Slam-Dunk Wireless Signaling** Solution for the GE Simon:

- Full alarm reporting to the Central Station in SIA and Contact ID formats.
- Not impacted by the AMPS Sunset Clause issue.
- Can be used as the primary means of communication, or as backup to a landline phone connection. Solves VoIP and cell-phone-only issues.
- Dealers can program the Simon panel remotely through the wireless connection -- change sensor names, groups, panel options and more.
- Alarm.com module is built into the GE Simon backplate for an easy and clean installation.
- The module is powered by the panel battery, safeguarding against power outages and eliminating the need for another power supply.
- Supports up to 23 zones, including up to 2 hardwired zones.
- No new software or receivers required in the Central Station.
